Profile

Data engineer building backend systems and ETL pipelines for electricity-data products. I work across ingestion, orchestration, asynchronous processing, dashboards, and the Linux infrastructure underneath.

Experience

Anacav
Data Engineer (Backend & ETL) — September 2025 – Present

- Build the backend and ETL behind electricity products using Python, Flask, Django, Dagster, Celery, and SQL.
- **Baresh:** Led the early backend and ETL for a B2C platform for industrial-town customers: packages, SMS, notifications, usage dashboards, and rankings. Serves 35,000 users with usage updates in under ten minutes; aggregate dashboards respond in under a second. Built load-aware job scheduling and reliable handoffs between ETL stages.
- **Payesh:** Build monitoring and reporting for separately installed B2B systems in multiple provinces. Managers track usage by feeder, business, organizational unit, aggregate, and customer class, with limits, notifications, and compliance tracking.
- Contributed to a hydropower dam monitoring system and a cryptocurrency miner detection tool.

VisitCenter — Behbahan, Khuzestan, Iran
DevOps Engineer (Remote) — November 2023 – September 2024

- Replaced manual deployment with Docker services, GitLab CI/CD pipelines, Jira ticketing, and Prometheus/Grafana monitoring.
- Administered GitLab, Nexus, mail, Linux services, and databases; implemented backup and recovery procedures.

Fardaad Intelligent Secure Processing Co. — Isfahan, Iran
Network Security Intern — July 2023 – October 2023

- Contributed to an internal penetration-testing report tool while practicing Windows and network-security testing with Active Directory, Kerberos, and Metasploit.

Selected Projects

Hermes Agent: Model-Aware Delegation — Open source
Built an extension in my Hermes Agent branch with model categories, capability tags, routing rules, dependency-aware task ordering, validation, tests, and developer documentation. Upstream project.

RansomXD: Ransomware Detection — January 2025
Undergraduate project: engineered features from executable-file access patterns and compared XGBoost with Random Forest; over 95% accuracy on its dataset. GitHub.

Other Public Projects — 2023
Built and compared recommender systems in Recommerce and explored reinforcement learning in Breakout.

Education

University of Isfahan — Isfahan, Iran
M.Sc. Computer Science (AI major) — October 2026 – Present

Isfahan University of Technology — Isfahan, Iran
B.Sc. Computer Engineering — 2020 – 2025

Major: Secure Computing

Technical Skills

Languages & Data: Python, SQL, C++, Go
Backend & ETL: Django, Flask, Dagster, Celery
Infrastructure & Monitoring: Linux, Docker, GitLab CI/CD, Prometheus, Grafana
Security: Active Directory, Kerberos, Metasploit | **English:** C1
